

Living & working on a riverbank

IF YOU LIVE OR WORK ON THE BANK OF A RIVER
OR STREAM, YOU PLAY AN IMPORTANT ROLE
IN THE HEALTH OF OUR INLAND WATERWAYS!

If you own or manage livestock, or are planning on undertaking works along the bank of a river or stream, here is some information to help you comply with the law.

Why are rivers and streams and their banks so important?

Rivers and streams are vital habitat for a range of species including fish, mussels, crayfish, frogs, turtles, platypus and water birds. They are also an important part of our way of life, providing water for livestock and domestic use, and supporting industries such as tourism, recreational and commercial fishing. Our waterways are under pressure from further development, an increasing demand for water use, and inappropriate land management practices that result in the loss of aquatic habitat, sedimentation, erosion and other water pollution issues.

Everyone has a role to play in ensuring our rivers and streams continue to be healthy and productive for future generations. Here are some useful tips to help you look after your river or stream and to comply with current laws aimed at protecting our waterways.

Managing your riverbank – the right way

Riverbank vegetation

Native riverbank or riparian vegetation provides many benefits to fish and other aquatic fauna as it helps to stabilise the riverbank, reducing bank erosion and siltation; provides food for aquatic insects and fish; and helps to shade the waterway which in turn regulates water temperature. Riverbank vegetation also acts as a natural filter by preventing pollutants such as soil, pesticides and fertilisers from washing into our waterways, helping to maintain good water quality.

Some useful things you can do to protect riverbank vegetation include:

- Reducing livestock access to riverbank vegetation by providing alternative paddock shade trees and watering points away from the waterway and introducing rotational grazing regimes.
- Protecting existing riverbank vegetation by managing livestock and vehicular access into these sensitive areas.
- Planting native trees and shrubs along the riverbank where they have been removed or damaged.
- Implementing weed control measures in consultation with your local council or Landcare group.

Your local Catchment Management Authority can also assist with advice on riverbank vegetation management and availability of funding to undertake works on your property that help to protect and restore native vegetation.

Snags

A "snag" refers to large woody debris from trees or shrubs, including whole fallen trees, large broken branches and exposed root balls that have fallen or washed into the river. Snags are very important as they provide habitat and breeding areas for fish and other species as well as helping to create different habitats within the river, such as refuge holes, and assisting in the stabilisation of the bed and banks.

Some useful things you can do to protect snags include:

- Retaining snags within the river or stream.
- Seeking approval from Fisheries NSW before considering any works to remove or relocate snags.
- Advising Fisheries NSW if you observe people removing snags from a river or other waterway by calling the Fishers Watch hotline on 1800 043 536.

Livestock management

Livestock grazing on the banks of rivers and streams can contribute to bank erosion and loss of valuable paddock soils to the river. Livestock manure can also impact on downstream water quality and the health of others using the waterway for recreational (swimming) and commercial use (e.g. aquaculture production).

Some useful things you can do to manage your livestock

- Install fencing to control livestock and reduce damage from grazing or trampling riverbanks and riparian vegetation.
- Provide paddock shade trees and livestock watering points away from the waterway to reduce the need for livestock to access the riverbank.
- Talk to your local Catchment Management Authority as they may be able to provide advice on funding opportunities to help you undertake fencing or native vegetation replanting to protect your riverbank.

Undertaking works on or near the riverbank

Works within a waterway or on riverbanks can have unforeseen consequences such as destabilising the bank, blocking the movement of fish, or damaging aquatic habitats. As rivers and streams are fragile environments, both State and local governments have an interest in ensuring that any works undertaken in or around waterways are done appropriately.

EXAMPLES OF SUCH WORKS INCLUDE:

- bank stabilisation works,
- constructing jetties, pontoons, wharves, boat ramps and other waterfront infrastructure,
- constructing, modifying or repairing waterway crossings (e.g. fords, causeways, culverts, bridges),
- modifying or repairing existing, or building new weirs or levee banks,
- removing or relocating large woody debris (snags), gravel beds, rocks or aquatic vegetation,
- dredging activities for navigation or for extraction of sand, gravel or other materials for private or commercial use, and,
- undertaking reclamation works by placing any sort of fill material on the bed or banks of a waterway.

By obtaining the required approvals, these sorts of works can be adequately assessed before they are undertaken to ensure that the river or stream's values are protected and the works are undertaken in an environmentally sensitive manner.

The need to obtain approvals generally applies regardless of the ownership of the land. Privately owned land is not exempt.

HOW CAN I DO THE RIGHT THING?

It is your responsibility to determine what approvals are required and obtain permission from the relevant authorities for any proposed works before any riverbank work commences. The best way to do this is to talk to your local Council first before you undertake any works or contact the other State agencies listed below. These works are often assessed as 'integrated development' by your local Council and require approval from other State agencies before Council can approve the works. These agencies include:

- **Department of Primary Industries 1300 550 474**
(Fisheries NSW, Crown Land Division and NSW Office of Water)
for Fisheries NSW in the first instance – for those works listed above
- **NSW Roads and Maritime Services 13 12 56**
if the works are associated with boating activities or may affect navigation
- **Your regional Catchment Management Authority (CMA)**
www.cma.nsw.gov.au
for contact details for your nearest CMA region

WHAT CAN HAPPEN IF I DON'T DO THE RIGHT THING?

Penalties of up to \$110,000 for individuals or \$220,000 for corporations can apply if works are undertaken without the necessary approvals. The above State agencies can also issue remediation orders to individuals or corporations to remediate a site where damage has occurred at their cost.
